

# LÂZZÛR

LIGHTING COMPANY

## INSTALLATION INSTRUCTIONS FOR L-P3114-B1-7SN

Please read this installation manual in its entirety prior to beginning assembly and installation of the product.

If you have questions, problems, or missing parts, please call customer service at (786) 681-1919 between the hours of 9 a.m. – 5:00 p.m., PST, Monday-Friday or email us at [support@lazzur.com](mailto:support@lazzur.com)

**DO NOT RETURN TO STORE!**  
**CALL (786) 681-1919**  
If you have installation or product questions.

# SAFETY INFORMATION

Upon arrival of the product, inspect the wires for any cuts or abrasions that could have occurred while in transit.

## IF A DEFECT IN THE WIRE IS FOUND, DO NOT ATTEMPT INSTALLATION.

Please call our customer service team at (786) 681-1919 or email us at support@lazzur.com

Proper wiring is essential for safe operation of this fixture. Make sure to not damage the electric wiring of the fixture or any other wiring/lines when drilling.

Check to make sure that no parts are missing prior to beginning installation of the fixture.

Use CSA/UL/ETL listed wire connectors suitable for the gauge, type, and number of conductors.

We recommend installation of this lighting fixture be done by a licensed electrician.

If in doubt about electrical installation, consult a licensed electrician.

All electrical connections must be made in accordance with local and National Electrical Code Standards (NEC) or Canadian Electrical Code Standards (CEC).

Contact your local municipal authority for more information regarding code, inspections, and permits.

LÄZZÜR lighting fixtures are intended to be installed utilizing compliant NEC/CEC junction boxes.

Before touching any wire, use a voltage tester to make sure it's not live.

Use non-conductive tools when installing the fixture, such as insulated handles and ladders made of wood or fiberglass.

Turn off power source to the lighting fixture prior to replacing bulbs. Give the bulbs adequate time to cool prior to removing them.

## TOOLS REQUIRED (NOT INCLUDED)

Wire Stripper

Plier

Electrical Tape

Safety Goggles

Ladder

Philips  
Screwdriver

Flat Blade  
Screwdriver

## PRIOR TO BEGINNING INSTALLATION

Ensure that all power supply has been disconnected, including turning off electricity at the circuit breaker, wall switch, or fuse box.

CIRCUIT BREAKER

WALL SWITCH

FUSE BOX

## WARNING

Improper installation may cause electrical shock, fire, or equipment damage. The installer must be familiar with the construction and operation of the product as well as its associated hazards.

### ELECTRICAL SHOCK CAN RESULT IN SERIOUS INJURY

90°C supply conductors minimum. Most houses built before 1985 have supply wires rated 60°C. Consult a qualified electrician prior to installation.

Bulbs are **NOT** included with the lighting fixture. Only use bulbs recommended for your fixture. **DO NOT EXCEED THE MAXIMUM WATTAGE.**

# ASSEMBLY INSTRUCTIONS

1. Attach the mounting strip (Part #1) to the junction box (**NOT INCLUDED**) in the ceiling by threading the two provided mounting screws (Part #2) from underneath the mounting strip. The remaining two fixture screws will be threaded through the top of the mounting strip (Part #1), and each will be secured with a hex nut from underneath. The fixture screws will later align with the canopy (Part #4) and be secured with the decorative nuts (Part #5).

2. Adjust the wire length to the desired height. The height can be adjusted by pulling the wire through the canopy and securing it with the anti-pull buckle that is located inside of the canopy. Cut any excess electrical wire, but be sure to leave at least 6"-12" minimum of electrical wire beyond the required length.

3. Connect the wires by using the wire connectors (Part #3). Make sure to use standard wire connectors when making connections.

- Connect the black wire from the fixture to the black (HOT) wire from the junction box.
- Connect the white wire from the fixture to the white (NEUTRAL) wire from the junction box.
- To connect the grounding wire, there are two options. Each option depends on the electrical wiring in the home and the type of junction box being used. You can either:
  1. Partially thread the green grounding screw onto the mounting bar, and then proceed to wrap the grounding wire from the fixture around the grounding screw. Tighten the green grounding screw. **DO NOT OVERTIGHTEN**. If necessary, wrap the remaining ground wire from the fixture with the grounding wire from the supply with a wire connector.
  2. Connect the grounding wire from the supply to the fixture ground wire using a wire connector.
- Make sure to wrap each connection with electrical tape for a more secure connection.
- Please avoid having electrical wire exposed when wiring connections.

4. Align the holes of the canopy (Part #4) with the bottom fixture screws on the mounting strip (Part #1). Lock tightly in place by using the decorative nut (Part #5).

5. Insert the lightbulb (Part #7; **NOT INCLUDED**) into the glass shade (Part #6).

## How to Identify the Fixture's Wires

	GROUND	NEUTRAL	HOT
Bare Metal		Smooth	Smooth
Green, or Green Inner Thread		White	Black
		White Inner Thread	Black Inner Thread

**DRY RATED**
